**Tough tools engineered for extreme environments.**
In 2007, DEWALT set itself the challenge of creating the most comprehensive system of the safest, highest performing professional construction tools in the world. This is the Perform & Protect system, made up of products that meet strict criteria in one or more of the following core safety-focused areas: Vibration; Control; Dust.

**VIBRATION**

Vibration exposure can cause a range of conditions collectively known as hand-arm vibration syndrome (HAVS). Other conditions include carpal tunnel syndrome and vibration white finger.

- D25601K 45mm SDS-Max Combination Hammer
  - 50% reduced vibration compared to previous model
  - Floating rear handle
  - Dampened side handle

When the Perform & Protect shield is awarded for VIBRATION, it is guaranteed that Tri-Axial vibration levels have been reduced, increasing usage time without reducing performance.

**CONTROL**

When drilling or cutting there is a chance that the tool could jam. This could cause damage to the tool or cause personal injury. When the Perform & Protect shield is awarded for CONTROL, it is guaranteed that additional innovative torque control safety features have been incorporated into the design of the tool.

- DW541K 10V XR™ SDS+ Rotary Hammer Drill
  - Lowest vibration in class
  - 3 Mode operation

- DWV150 Electro-Mechanical clutch reduces the “kickback” transmitted to the operator if the cutting disc jams.

**DUST**

Airborne dust inhalation can lead to a number of long term health conditions such as silicosis and chronic obstructive pulmonary disease (COPD). When the Perform & Protect shield is awarded for DUST, it is guaranteed the potential of inhaling dust is reduced to give a cleaner and safer working environment.

- D28136 Electro-Mechanical clutch reduces the “kickback” transmitted to the operator if the cutting disc jams.

- DWE46150 Collects harmful dust particles during surface grinding applications

**THE NEW EXTENDED DEWALT® XLR® SERIES...**

An optimised head design delivering improved durability and reduced vibration. A 4-flute helix to improve drilling speed through faster debris removal. These features combine to give improved performance and durability in the hardest concrete.
MANUFACTURING
DRILLING AND SAWING

DEWALT DRILLING SOLUTIONS
DEWALT is a market-leading manufacturer of high performance power tools and accessories that provide a fully integrated drilling system for masonry, metal and wood. Its dedicated accessories factory in Germany was established in 1959 and now employs over 200 people, producing more than 40 million drill bits every year.

MANUFACTURING
To ensure maximum performance and customer satisfaction, DEWALT drill bits undergo the most rigorous manufacturing and testing procedures (including computer controlled milling) and the most advanced production and quality management processes. DEWALT not only produces its own bits, it even designs the machines that make them.

PRODUCT DEVELOPMENT
Through extensive field research, DEWALT has gained a comprehensive knowledge of user needs and applications. Its world-class development facility utilises the latest Catia CAD system and automated test equipment to develop and test all drill bits prior to and during manufacture.

QUALITY CONTROL
DEWALT is a long-standing member of PRUF GEMEINSCHAFT MAUERBOHRER (PGM), an internationally recognised organisation that verifies the suitability of drill bits for use in anchor fixing. To test drill bit life and durability 1 million holes are drilled into 350 tons of concrete each year, this will ensure that if there is any variability in quality it is detected before the products are delivered to the end user. All drill bits are certified to the latest ISO 9001:2000 quality standards as well as being tested using highly scientific machines to ensure their excellent quality.

SAW BLADE MANUFACTURING
More than 70 years of engineering expertise and innovation have been invested in the development of the latest circular saw blades from DEWALT Manufactured from premium materials, their combination of precision, accuracy, smooth cut finish and durability delivers outstanding performance across a wide range of operations to make them the ideal choice for the professional user.

• The heavy gauge steel used for the blade is hardened, tempered and precision balanced to provide more accurate cutting.
• Ultra-sharp cutting edges dramatically reduce splintering and breakout.
• Extra-hard tungsten carbide teeth remain sharp over longer periods.
• Large micro-grain carbide teeth are precision ground so that each individual tooth actually planes the wood to give an exceptionally smooth finish.
• Laser cut expansion slots in the blades minimise noise and vibration to ensure an excellent finish to cut surfaces.

QUALITY BEGINS AT SHELBYVILLE
To ensure long-lasting performance and user satisfaction DEWALT circular saw blades undergo the most rigorous production and testing procedures at its manufacturing facility in Shelbyville, USA. This advance in process control has been achieved through significant investment and the adoption of Six Sigma quality management processes.

OUR COMPANY
As the brand renowned for the toughness and quality of its Professional Power Tools, DEWALT also offers a wide range of High Performance Accessories. Professional Tradesmen require the highest level of performance in the course of their work and expect a professional quality accessory to enhance the performance of their tools.

As a result of extensive research of our user’s requirements, the DEWALT accessory range is designed and developed to withstand even the most demanding conditions. This is due to the exceptional innovation built into the Extreme DEWALT range of products, as well as the end user driven range of high performance products such as XPC jigsaw blades and Extreme saw blades. Other examples of the DEWALT accessory range that feature market leading performance include reciprocating saw blades and high performance bi-metal holesaws and mandrels.

As with DEWALT power tools, DEWALT accessories utilise state-of-the-art technology and computer aided design during the development process backed up by modern test laboratories as well as substantial field test programmes.

QUALITY CONTROL

DeWALT is a long-standing member of PRUF GEMEINSCHAFT MAUERBOHRER (PGM), an internationally recognised organisation that verifies the suitability of drill bits for use in anchor fixing. To test drill bit life and durability 1 million holes are drilled into 350 tons of concrete each year, this will ensure that if there is any variability in quality it is detected before the products are delivered to the end user. All drill bits are certified to the latest ISO 9001:2000 quality standards as well as being tested using highly scientific machines to ensure their excellent quality.

**CIRCULAR SAW BLADES**

More than 70 years of engineering expertise and innovation has been invested in the development of the latest circular saw blades from DeWALT. Manufactured from premium materials, their combination of precision, accuracy, smooth cut finish and durability delivers outstanding performance across a wide range of applications, to make them the ideal choice for the professional user.

**GRIND GEOMETRY**

- **FLAT TOP GRIND (FT)**: Teeth ground flat across top with 0 degree bevel. Ideal for ripping and general purpose, where quality of finish is less important than cut force.
- **TRIPLE CHIP GRIND (TCG)**: Flat top teeth alternates with slightly trapezoidal teeth that make a narrower cut, in prevent chipping brittle materials such as laminates.
- **HOLLOW GROUND (HG)**: Very sharp edges designed to form a step-free finish - top and bottom. Ideal for cutting double sided composite board, eg. melamine.
- **ALTERNATE TOP BEVEL (ATB)**: Teeth where the top bevel alternates from left to right, with bevel angle ranging 10 to 25 degrees. Ideal for cross cutting in hard and softwoods and general purpose woodworking.

**APPLICATIONS**
- FAST RIP: Blades designed for fast rip of soft and hard natural wood. Ideal for pre-sizing applications. ATB grind geometry, low tooth count and aggressive rake angles.
- GENERAL PURPOSE & CROSS CUT: For all purpose rip and cross cutting in natural wood, plywood, laminates, and particle board. ATB grind geometry, medium tooth count and positive rake angles allow the blades to cut at higher feed speeds.
- FINE FINISH & CROSS CUT: For smooth cross cuts in plywood, softwood, and all hardwoods. ATB grind geometry, high tooth count and aggressive rake angles.
- EXTRA FINE FINISH: Blades designed for EXTRA fine cuts in plywood, veneers, laminates and plastics. Blades are tuned to avoid breakout on laminate materials. TCG grind geometry gives excellent surface finish on workpiece.
- ALUMINIUM CUTTING: Blades optimised for cutting in Aluminium. TCG grind geometry gives clean and accurate finish on workpiece.

**CIRCULAR SAW BLADES**

**FEATURES**
- Heavy duty tungsten carbide tips maintain cutting edge for longer blade life.
- Thin kerf blade design - yields more cuts per charge by minimising battery drain.
- Triple action sharpening process which grinds the tip to a razor sharp edge for a smooth finish.
- Specifically designed for use with DeWALT Cordless Trimsaws. The range comprises of blades for cutting wood and for cutting plastic & non-ferrous metals.

Product must be complete as purchased and proof of purchase must be produced. Spare parts and Accessories are excluded unless failed under warranty.

1 YEAR FREE SERVICE CONTRACT
If you require maintenance or service for your DeWALT product within 12 months of purchase, you are entitled to one service free of charge, undertaken at an authorised DeWALT repair agent. Proof of purchase must be produced. Includes labour. Spare parts and Accessories are excluded, unless failed under warranty.

3 YEAR LIMITED WARRANTY
In the unlikely event that your DeWALT product becomes defective due to faulty materials or workmanship within 3 years of purchase, DeWALT guarantees to replace all defective parts free of charge or, at our discretion - replace the unit free of charge. In order to make a claim, you will need to submit proof of purchase to the seller or an authorised DeWALT repair agent.

This is provided that the product has not been misused and has been subject to fair wear and tear. Our warranty covers products purchased within ANZ from authorised distributors. Products purchased outside of, or parallel imported into Australia or New Zealand, are not covered under our local ANZ warranty.

Any attempt by anyone other than an authorised service repair agent to service a tool during the warranty period will invalidate the warranty for said tool.

BATTERY MAINTENANCE

In order to get the best out of your DeWALT battery we recommend you follow these sample steps:

1. How do battery packs fail?
   Battery packs fail because of old age. Other failures include overheating, short circuit and damage due to sudden impact.

2. What can I do to get maximum use from my battery?
   * Most DeWALT NiCd/NiMH chargers offer a 10 hour “refresh” program which should be used weekly.
   * Do not overload your tool.
   * Store your battery packs in dry conditions between 4 and 20°C

3. What is ‘memory effect’ and does it affect power tool batteries?
   Memory can cause a loss of runtime. Memory is created from repetitive shallow discharges. Power Tools rarely see shallow discharges under the exact same load. Whilst NiCd and NiMH can suffer from this condition, Li-Ion does not.

4. Should a battery be discharged completely before being charged?
   No power tool battery should be discharged completely before charging, this is more likely to permanently damage the battery pack than prolong the battery pack’s life.

5. Can I use a DeWALT battery pack with the same voltage but different chemistry in my product?
   A tool bought with a Li-Ion, NiCd or NiMH battery pack can be used with the other chemistries. It is best to check compatibility with your local dealer or DeWALT Service team.

6. Can I use a DeWALT battery pack with the same voltage but different capacity (Amp hours) rating in my product?
   The capacity a battery has is relevant to the amount of run time you will receive from it, assuming that the voltage and battery style are the same and you have checked the chemistry, it will be compatible.

7. Can any DeWALT charger be used to charge any DeWALT battery?
   No. Different chargers are suitable for use with different batteries check with your local dealer or DeWALT Service team if you are unsure.
